**GENERAL INFORMATION**

The Selador Desire D60 Studio lighting fixture uses the newest technology in high-output white-light LEDs to create an ideal luminaire for video, film and other ‘white-light-only’ applications. Three different LED options give the user a choice for just the right white-light output for the job. The D60 Studio offers a rugged die-cast enclosure; quiet, fan-cooled operation; multiple lens options; and an advanced user interface. The user interface enables easy configuration and specific features for video and film applications. The fixture can be configured to operate under console control for studio systems or in stand-alone ‘no console required’ settings for location lighting.

**D60 Studio LED options**

The D60 Studio fixture is available with any one of the following arrays based on specific white-light functions to best suit the intended application (not interchangeable).

- D60 Studio HD – combines warm-white and cool-white LEDs for variable-color-temperature mixing. Added to this are five carefully chosen LED colors from the x7 Color System to fill in the white LED spectral gaps. D60 Studio HD provides the richest variable-white light possible in an LED fixture.
- D60 Studio Daylight – contains sixty 5600 K LEDs for high-intensity, non-variable cool-white output
- D60 Studio Tungsten – contains sixty 3000 K LEDs for high-intensity, non-variable warm-white output

-------------------------------	---

ETC utilizes a nationally recognized third-party lab for luminaire testing according to IES LM-84. See [etconnect.com/About/News/ETC-Fixture-Ratings-and-Warranties-Extended.aspx](http://etconnect.com/About/News/ETC-Fixture-Ratings-and-Warranties-Extended.aspx).

All LED sources experience some lessening of light output and some color shift over time. LED output will vary with thermal conditions. In individual situations, LEDs will be used for different durations and levels. This can eventually lead to minor alterations in color performance, necessitating slight adjustments to presets, cues or programs.

PRODUCT FEATURES

**INDUSTRY LEADING WARRANTY**  
 Unmatched five year fixture and ten year warranty on the LED array.

**MULTIPLE LED ARRAY OPTIONS**  
 Available in three white-light arrays to best outfit your studio.

**USER FRIENDLY INTERFACE**  
 With multiple modes and fixture settings.

## CRI AND CQS RATINGS

Desire fixtures were evaluated for CRI and CQS performance using measured output spectrum and optimized mix solutions for the best spectral match to black body sources at 3200 K and 5600 K.

FIXTURE	CRI	CQS	COLOR FIDELITY	DUV
D60 Vivid at 3200 K	87	89	89	0.000
D60 Vivid at 5600 K	90	92	92	0.000
D60 Lustr+ at 3200 K	86	88	88	0.000
D60 Lustr+ at 5600 K	93	92	92	0.000
D60 Studio HD at 3200 K	89	90	91	0.000
D60 Studio HD at 5600 K	92	94	94	0.000
D60 Studio Daylight at 5600 K	71	70	63	0.001
D60 Studio Tungsten at 3000 K	86	86	86	0.001

All D60 Studio luminaire versions provide excellent color rendering to the eye, particularly at higher color temperature settings, such as 5600 K. In most cases, the Duv is 0.000. A Duv rating of 0.000 indicates that the color mix used is exactly on the black body line, with no green or magenta tint.

## Notes to videographers:

- All Desire fixtures use Luxeon Rebel ES emitters specified by the strictest binning standards. However, on-camera LED response varies with different cameras and settings. Daylight LEDs can appear slightly greener than other 5600 K sources on camera.
- Fixtures with non-variable, single-color daylight arrays, such as Studio Daylight, may use standard color correction filters (Rosco 3314, Rosco 3316 or similar) to achieve the desired on-camera result.
- Camera tests using your specific setup are recommended to determine the best configuration.

CONTROL OPTIONS

Studio HD

User settings on D60 Studio fixtures allow multiple operational modes and settings for either console operation via DMX protocol or stand-alone operation. The expanded LCD display provides easy navigation to all possible settings and options. Some of the setting options are:

- Multiple DMX choices ranging from a simple RGB profile – which effectively controls all seven LED colors via three channels – to nine-channel direct color and intensity control
- Multiple dimming curve options
- Preset colors and effects for stand-alone (no console required) operation
- White point selection – white light and color behavior based on a specific color temperature white light, i.e., 3200 K, 5600 K, etc.
- Loss of data behavior options – instant off, hold last look for two minutes, etc.
- Output modes – three output options that offer the user a choice between maximum output and maximum consistency

See the User Manual for a complete explanation of all of the control settings and options for the D60 Studio.

Quick Setups

Use one of five Quick Setups on the fixture display to get started. You can modify the setting as needed.

DMX Input Channel Profiles

DMX Profile	DMX Channels	Channel Assignments	Notes
The Studio HD color array is designed for white-light use. RGB, HSI and HSIC profiles will operate as described but will produce a limited intensity and gamut of deep colors.			
Studio	6 (Ch. 4 not used)	1 – Intensity 2 – Color Point (CCT) 3 – Tint 4 – n/a 5 – Strobe 6 – Fan Control	Controls fixture as a white-light unit. If no DMX is present, (console input, for example) fixture can be adjusted for these three parameters on the UI at the back of the unit
Direct	10	1 – Red 2 – Amber 3 – Green/Cyan 4 – Blue 5 – 3000 K White 6 – 6000 K White 7 – n/a 8 – Intensity 9 – Strobe 10 – Fan Control	Direct control of each individual color with a separate master intensity channel. Color calibration of LEDs is not active in this mode. The ten-channel profile will produce the highest-quality color crossfades
HSI	6	1 – Hue (coarse) 2 – Hue (fine) 3 – Saturation 4 – Intensity 5 – Strobe 6 – Fan Control	High-resolution hue (two channels), saturation, and intensity control. HSI mode will produce color crossfades around the color space
HSIC	7	1 – Hue (coarse) 2 – Hue (fine) 3 – Saturation 4 – Intensity 5 – Strobe 6 – Fan Control 7 – Color Point (CCT)	High-resolution hue, saturation and intensity control as above, with the addition of a color-point channel to adjust the color temperature of the fixture in both white light and color. Color crossfade performance is the same as HSI
RGB	6 (Ch. 4 not used)	1 – Red 2 – Green 3 – Blue 4 – n/a 5 – Strobe 6 – Fan Control	Effectively addresses all seven colors via three channels of control. RGB profile will produce medium-quality color crossfades

Additional profile options

Plus 7	Seven additional color control channels are available in RGB, HSI, and HSIC, and Studio profile settings. For example, HSI with 'Plus 7' enabled becomes a 15-channel profile:		
	<ul style="list-style-type: none"> <li>1 – Hue (coarse)</li> <li>2 – Hue (fine)</li> <li>3 – Saturation</li> <li>4 – Intensity</li> <li>5 – Strobe</li> <li>6 – Fan Control</li> <li>7 – n/a</li> <li>8 – Plus Seven Control (on/off)</li> <li>9 – Red</li> <li>10 – Green/Cyan</li> <li>11 – Amber</li> <li>12 – Blue</li> <li>13 – 3000 K White</li> <li>14 – 6000 K White</li> <li>15 – n/a</li> </ul>	The desired color and intensity are achieved by using the HSI or RGB channels  Placing channel 8 at a value over 51% gives the fixture a 15-channel profile  Channels 9–15 represent the native colors of the fixture and allow the operator to adjust individual color channels to fine tune the color output	
Strobe	Variable strobe control: 0% is no strobe. The fixture output will strobe more rapidly as the strobe channel value approaches 100%.

**THROW DISTANCE MULTIPLIER (TDM)**

To determine the distance from the center of the beam (Origin) to a certain illuminance level at a particular distance, multiply the desired throw distance by the TDM desired on the Iso-Illuminance diagram.

Throw Distance (TD) x Throw Distance Multiplier (TDM) = Distance from the Origin (DfO) (distance from the center of the beam)

Example: 25 feet (TD) x 0.047 (TDM) = 1.175 feet from center of beam (DfO)

For illumination with any lamp, multiply the candlepower of a beam spread by the multiplying factor (mf) shown for that lamp.

To determine illumination in footcandles or lux at any throw distance, divide candlepower by distance squared.
